OUC Default

Paper Foam `rgb(239, 246, 255)`

Desert Foam `rgb(219, 234, 254)`

Sea Smoke `rgb(96, 165, 250)`

Crisp Sky `rgb(37, 99, 235)`

Twilight Blue `rgb(30, 58, 138)`

Midnight Hull `rgb(30, 41, 59)`

The factory ground tone of the template. Blue is the colour of the young scholar—from the first lecture page at dawn, through the library window at noon, to the cold lab light at midnight, blue spans the entire colour temperature of academic life. Six tones run from lightest to deepest, deliberately restrained, mirroring the arc of opening a book and closing it again. The palette does not ask to be looked at; it asks to let the words themselves be seen.

List of Figures

- 1 This is a margin figure. The helix is defined by $x = \cos(2\pi z)$, $y = \sin(2\pi z)$, and $z = [0, 2.7]$. The figure was drawn using Asymptote (<http://asymptote.sf.net/>). 35
- 2 This graph shows $y = \sin x$ from about $x = [-10, 10]$. Notice that this figure takes up the full page width. 35
- 3 Hilbert curves of various degrees n . 36

List of Tables

- 1 Heading styles used in *Beautiful Evidence*. 31
- 2 Environment styles used in *Beautiful Evidence*. 31
- 3 Here are the dimensions of the various margins used in the Tufte-handout class. 36
- 4 Heading levels used with the `secnumdepth` counter. 42

*Dedicated to those who appreciate L^AT_EX
and the work of Edward R. Tufte and Donald E. Knuth.*

Introduction

This sample book discusses the design of Thomas Shang's Tufte-style book template on the basis of Edward Tufte's books¹ and the use of the `tufte-book` and `tufte-handout` document classes.

¹ Edward R. Tufte. *The Visual Display of Quantitative Information*. Cheshire, Connecticut: Graphics Press, 2001. isbn: 0-9613921-4-2, Edward R. Tufte. *Envisioning Information*. Palette Guide

This sample book now exposes the same palette interface as the beamer template, extended with the thematic palette groups discussed for this project. Select a palette with `\OUCSetPalette{N}` in the preamble. The six swatches in each entry run from `pal1` to `pal6`, ordered light to dark; `primary` maps to `pal5`, `accent` maps to `pal6`, and the Kyoto palette additionally exposes `spotcolor` for its restrained torii red accent.

Template Reference

Showcase of Boxed Environments

This chapter mirrors the demonstration frames in the companion `OUC-Haide-Beamer-Template` so that the book and the slide deck share identical environment names, palette logic, and listing style. Each section below pairs the *rendered* environment on the left with its exact *source* on the right; the active palette is `OUC Default` and can be swapped via `\OUCSetPalette{N}`.

Slot Semantics

Six palette slots drive every coloured element: `pal1=paleblue` listing background, `pal2` body fill for `Exa/Rmk/Intro`, `pal4` title fill for the same trio, `pal5=primary` emphasis (theorem titles, frame titles, footer), `pal6=accent` darkest swatch (definition title, chapter heads).

Definition and Theorem

Definition 0.1: Group

A set with an associative binary operation, an identity element, and inverses for every element.

Theorem 0.2: Lagrange

If $H \leq G$ is a subgroup of a finite group, then $|H|$ divides $|G|$.

```
1 \begin{De}{Group}{de:g}
2   A set with an associative
3   operation, identity, inverses.
4 \end{De}
5 \begin{The}{Lagrange}{the:lag}
6   If  $H \leq G$ , then  $|H|$ 
7   divides  $|G|$ .
8 \end{The}
```

*Example and Remark***Example 0.3**

$\mathbb{Z}/6\mathbb{Z}$ is a cyclic group of order 6, generated by the residue class of 1.

Remark 0.4

The trivial group $\{e\}$ is the unique group of order 1 up to isomorphism.

```

1 \begin{Exa}{}{exa:cyc}
2   $\mathbb{Z}/6\mathbb{Z}$ is
3   cyclic of order $6$.
4 \end{Exa}
5 \begin{Rmk}{}{rmk:tr}
6   The trivial group $\{e\}$ is the
7   unique group of order $1$.
8 \end{Rmk}
```

*Proposition, Lemma, Corollary***Proposition 0.5: Closure**

$H \cap K$ is closed under the group operation whenever $H, K \leq G$.

Lemma 0.6: Cancellation

If $ab = ac$ in a group then $b = c$.

Corollary 0.7: Order divides

$|\langle g \rangle|$ divides $|G|$.

```

1 \begin{Pro}{Closure}{pro:cl}
2   $H\cap K$ is closed.
3 \end{Pro}
4 \begin{Le}{Cancellation}{le:can}
5   If $ab=ac$, then $b=c$.
6 \end{Le}
7 \begin{Co}{Order divides}{co:ord}
8   $|\langle g \rangle|$ divides
9   $|G|$.
10 \end{Co}
```

Proof and Boxed

Proof $x \in H \cap K \Rightarrow x \in H$ and $x \in K$, so the intersection is a subgroup. $\square$

Rounded container, suited for paragraph-sized notes, derivations or summaries that should be visually grouped together.

```
1 \begin{Proof}
2   $x\in H\cap K \Rightarrow$
3   $x\in H$ and $x\in K$.
4 \end{Proof}
5 \begin{Boxed}
6   Rounded container for
7   paragraph-sized notes.
8 \end{Boxed}
```

Intro and RightIntro

Chapter Intro

Title attached to the upper-left corner; useful as a chapter or section opener that previews the goal.

Right Intro

Mirrored variant with the title attached to the upper-right corner.

```
1 \begin{Intro}{Chapter Intro}
2   {Title in the upper-left
3   corner.}
4 \end{Intro}
5 \begin{RightIntro}{Right Intro}
6   {Title in the upper-right
7   corner.}
8 \end{RightIntro}
```

UnderlineBox and Quote

Underlined block bracketed by primary-coloured rules.

Mathematics is the queen of the sciences.

C.F. Gauss

```
1 \UnderlineBox{Underlined block
2   with two coloured rules.}
3 \Quote[Mathematics is the queen
4   of the sciences.]{C.,F.~Gauss}
```

*Minipage, Eq, EqL***Left.**

Side-by-side layout
helper.

$$a^2 + b^2 = c^2$$

$$e^{i\pi} + 1 = 0 \quad (1)$$

Right.

Widths must sum
below 1.

```
1 \Minipage{0.46}{Left content}
2 {0.46}{Right content}
3 \Eq{a^2 + b^2 = c^2}
4 \EqL{e^{i\pi} + 1 = 0}{eq:euler}
```

Info, Warn, Result, Goal Boxes

Background, definitions, and context.

Caveats, assumptions, and risks.

Findings, conclusions, and final outputs.

A short highlighted message.

```
1 \begin{infobox}...\end{infobox}
2 \begin{warnbox}...\end{warnbox}
3 \begin{resultbox}...\end{resultbox}
4 \begin{goalbox}...\end{goalbox}
```

Listing Style for Code

The `oucboklisting` style is registered as the default for the `listings` package and follows the palette: paleblue background, primary key-words, accent strings, grey frame. The same style is shared with the beamer template.

Matlab

```
1 function y = laplacian(u, dx)
2 % Five-point discrete Laplacian on a uniform grid.
3 y = (circshift(u,[0 -1]) + circshift(u,[0 1]) ...
4     + circshift(u,[-1 0]) + circshift(u,[ 1 0]) - 4*u) / dx^2;
5 end
```

Python

```
1 def softmax(x):
2     """Numerically stable softmax."""
```

```
3     z = x - x.max(axis=-1, keepdims=True)
4     e = np.exp(z)
5     return e / e.sum(axis=-1, keepdims=True)
```

Shell

```

Part II

The First Part

The Design of Tufte's Books

The pages of a book are usually divided into three major sections: the front matter (also called preliminary matter or prelim), the main matter (the core text of the book), and the back matter (or end matter).

The front matter of a book refers to all of the material that comes before the main text. The following table from shows a list of material that appears in the front matter of *The Visual Display of Quantitative Information*, *Envisioning Information*, *Visual Explanations*, and *Beautiful Evidence* along with its page number. Page numbers that appear in parentheses refer to folios that do not have a printed page number (but they are still counted in the page number sequence).

Page content	Books			
	VDQI	EI	VE	BE
Blank half title page	(1)	(1)	(1)	(1)
Frontispiece ²	(2)	(2)	(2)	(2)
Full title page	(3)	(3)	(3)	(3)
Copyright page	(4)	(4)	(4)	(4)
Contents	(5)	(5)	(5)	(5)
Dedication	(6)	(7)	(7)	7
Epigraph	–	–	(8)	–
Introduction	(7)	(9)	(9)	9

² The contents of this page vary from book to book. In *VDQI* this page is blank; in *EI* and *VE* this page holds a frontispiece; and in *BE* this page contains three epigraphs.

The design of the front matter in Tufte's books varies slightly from the traditional design of front matter. First, the pages in front matter are traditionally numbered with lowercase roman numerals (*e.g.*, i, ii, iii, iv, ...). Second, the front matter page numbering sequence is usually separate from the main matter page numbering. That is, the page numbers restart at 1 when the main matter begins. In contrast, Tufte has enumerated his pages with arabic numerals that share the same page counting sequence as the main matter.

There are also some variations in design across Tufte's four books.

The page opposite the full title page (labeled “frontispiece” in the above table) has different content in each of the books. In *The Visual Display of Quantitative Information*, this page is blank; in *Envisioning Information* and *Visual Explanations*, this page holds a frontispiece; and in *Beautiful Evidence*, this page contains three epigraphs.

The dedication appears on page 6 in *VDQI* (opposite the introduction), and is placed on its own spread in the other books. In *VE*, an epigraph shares the spread with the opening page of the introduction.

None of the page numbers (folios) of the front matter are expressed except in *BE*, where the folios start to appear on the dedication page.

The full title page of each of the books varies slightly in design. In all the books, the author’s name appears at the top of the page, the title is set just above the center line, and the publisher is printed along the bottom margin. Some of the differences are outlined in the following table.

Feature	VDQI	EI	VE	BE
Author				
Typeface	serif	serif	serif	sans serif
Style	italics	italics	italics	upright, caps
Size	24 pt	20 pt	20 pt	20 pt
Title				
Typeface	serif	serif	serif	sans serif
Style	upright	italics	upright	upright, caps
Size	36 pt	48 pt	48 pt	36 pt
Subtitle				
Typeface	–	–	serif	–
Style	–	–	upright	–
Size	–	–	20 pt	–
Edition				
Typeface	sans serif	–	–	–
Style	upright, caps	–	–	–
Size	14 pt	–	–	–
Publisher				
Typeface	serif	serif	serif	sans serif
Style	italics	italics	italics	upright, caps
Size	14 pt	14 pt	14 pt	14 pt

The tables of contents in Tufte’s books give us our first glimpse of the structure of the main matter. *The Visual Display of Quantitative Information* is split into two parts, each containing some number of chapters. His other three books only contain chapters—they’re not broken into parts.

Typefaces

Tufte’s books primarily use two typefaces: Bembo and Gill Sans. Bembo is used for the headings and body text, while Gill Sans is used for the title page and opening epigraphs in *Beautiful Evidence*.

Since neither Bembo nor Gill Sans are available in default L^AT_EX installations, the Tufte-L^AT_EX document classes default to using Palatino and Helvetica, respectively. In addition, the Bera Mono typeface is used for monospaced type.

The following font sizes are defined by the Tufte-L^AT_EX classes: The body text is set at 10/14, sidenotes and captions at 8/10, the main heading sizes step upward through 11/15 and 12/16, and the largest book heads reach 20/30 for chapters and 24/36 for parts.

Headings

Tufte’s books include the following heading levels: parts, chapters,³ sections, subsections, and paragraphs. Not defined by default are: sub-subsections and subparagraphs.

³ Parts and chapters are defined for the `tufte-book` class only.

Heading	Style	Size
Part	roman	24/36×40 pc
Chapter	italic	20/30×40 pc
Section	italic	12/16×26 pc
Subsection	italic	11/15×26 pc
Paragraph	italic	10/14

Table 1: Heading styles used in *Beautiful Evidence*.

Paragraph Paragraph headings (as shown here) are introduced by italicized text and separated from the main paragraph by a bit of space.

Environments

The following characteristics define the various environments:

Environment	Font size	Notes
Body text	10/14×26 pc	
Block quote	9/12×24 pc	Block indent (left and right) by 1 pc
Sidenotes	8/10×12 pc	Sidenote number is set inline, followed by word space
Captions	8/10×12 pc	

Table 2: Environment styles used in *Beautiful Evidence*.

On the Use of the *tufte-book* Document Class

The Tufte- $\text{\LaTeX}$ document classes define a style similar to the style Edward Tufte uses in his books and handouts. Tufte’s style is known for its extensive use of sidenotes, tight integration of graphics with text, and well-set typography. This document aims to be at once a demonstration of the features of the Tufte- $\text{\LaTeX}$ document classes and a style guide to their use.

Page Layout

Headings

This style provides a- and b-heads (that is, `\section` and `\subsection`), demonstrated above.

If you need more than two levels of section headings, you’ll have to define them yourself at the moment; there are no pre-defined styles for anything below a `\subsection`. As Bringhurst points out in *The Elements of Typographic Style*,⁴ you should “use as many levels of headings as you need: no more, and no fewer.”

The Tufte- $\text{\LaTeX}$ classes will emit an error if you try to use `\subsubsection` and smaller headings.

In his later books,⁵ Tufte starts each section with a bit of vertical space, a non-indented paragraph, and sets the first few words of the sentence in small caps. To accomplish this using this style, use the `\newthought` command:

```
\newthought{In his later books}, Tufte starts...
```

Sidenotes

One of the most prominent and distinctive features of this style is the extensive use of sidenotes. There is a wide margin to provide

⁴ Robert Bringhurst. *The Elements of Typography*. 3.1. Hartley & Marks, 2005. isbn: 0-88179-205-5

⁵ Edward R. Tufte. *Beautiful Evidence*. First. Graphics Press, LLC, May 2006. isbn: 0-9613921-7-7

ample room for sidenotes and small figures. Any `\footnotes` will automatically be converted to sidenotes.⁶ If you'd like to place ancillary information in the margin without the sidenote mark (the superscript number), you can use the `\marginnote` command.

The specification of the `\sidenote` command is:

```
\sidenote[⟨number⟩][⟨offset⟩]{Sidenote text.}
```

Both the `⟨number⟩` and `⟨offset⟩` arguments are optional. If you provide a `⟨number⟩` argument, then that number will be used as the sidenote number. It will change of the number of the current sidenote only and will not affect the numbering sequence of subsequent sidenotes.

Sometimes a sidenote may run over the top of other text or graphics in the margin space. If this happens, you can adjust the vertical position of the sidenote by providing a dimension in the `⟨offset⟩` argument. Some examples of valid dimensions are:

```
1.0in      2.54cm      254mm      6\baselineskip
```

If the dimension is positive it will push the sidenote down the page; if the dimension is negative, it will move the sidenote up the page.

While both the `⟨number⟩` and `⟨offset⟩` arguments are optional, they must be provided in order. To adjust the vertical position of the sidenote while leaving the sidenote number alone, use the following syntax:

```
\sidenote[][⟨offset⟩]{Sidenote text.}
```

The empty brackets tell the `\sidenote` command to use the default sidenote number.

If you *only* want to change the sidenote number, however, you may completely omit the `⟨offset⟩` argument:

```
\sidenote[⟨number⟩]{Sidenote text.}
```

The `\marginnote` command has a similar *offset* argument:

```
\marginnote[⟨offset⟩]{Margin note text.}
```

References

References are placed alongside their citations as sidenotes, as well.

This can be accomplished using the normal `\cite` command.⁷

The complete list of references may also be printed automatically by using the `\bibliography` command. (See the end of this document for an example.) If you do not want to print a bibliography at the end of your document, use the `\nobibliography` command in its place.

⁶ This is a sidenote that was entered using the `\footnote` command.

This is a margin note. Notice that there isn't a number preceding the note, and there is no number in the main text where this note was written.

⁷ The first paragraph of this document includes a citation.

To enter multiple citations at one location,⁸ you can provide a list of keys separated by commas and the same optional vertical offset argument: `\cite{Tufte2006,Tufte1990}`.

`\cite[⟨offset⟩]{bibkey1,bibkey2,...}`

Figures and Tables

Images and graphics play an integral role in Tufte's work. In addition to the standard `figure` and `tabular` environments, this style provides special figure and table environments for full-width floats.

Full page-width figures and tables may be placed in `figure*` or `table*` environments. To place figures or tables in the margin, use the `marginfigure` or `marginfigure` environments as follows (see figure 1):

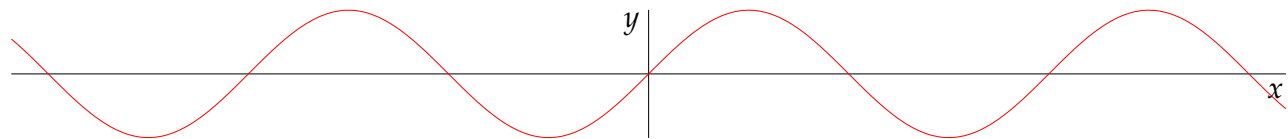

```
\begin{marginfigure}
  \includegraphics{helix}
  \caption{This is a margin figure.}
  \label{fig:marginfig}
\end{marginfigure}
```

The `marginfigure` and `marginfigure` environments accept an optional parameter `⟨offset⟩` that adjusts the vertical position of the figure or table. See the "Sidenotes" section above for examples. The specifications are:

```
\begin{marginfigure}[⟨offset⟩]
  ...
\end{marginfigure}

\begin{marginfigure}[⟨offset⟩]
  ...
\end{marginfigure}
```

Figure 2 is an example of the `figure*` environment and figure 3 is an example of the normal `figure` environment.

As with sidenotes and marginnotes, a caption may sometimes require vertical adjustment. The `\caption` command now takes a second optional argument that enables you to do this by providing a dimension `⟨offset⟩`. You may specify the caption in any one of the following forms:

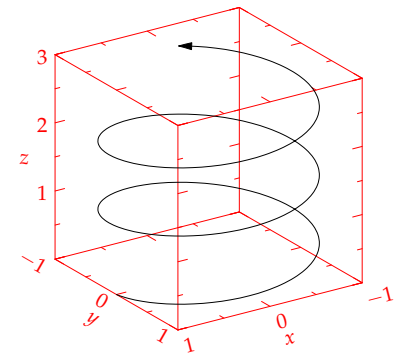

Figure 1: This is a margin figure. The helix is defined by $x = \cos(2\pi z)$, $y = \sin(2\pi z)$, and $z = [0, 2.7]$. The figure was drawn using Asymptote (<http://asymptote.sf.net/>).

Figure 2: This graph shows $y = \sin x$ from about $x = [-10, 10]$. Notice that this figure takes up the full page width.

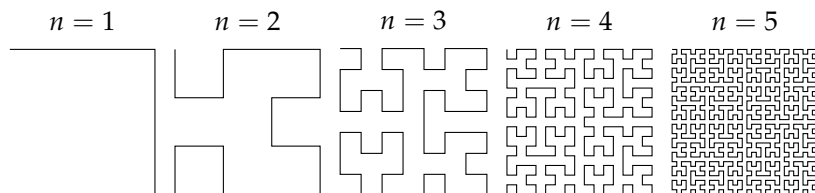

Figure 3: Hilbert curves of various degrees n . Notice that this figure only takes up the main textblock width.

```
\caption{long caption}
\caption[short caption]{long caption}
\caption[][\offset]{long caption}
\caption[short caption][\offset]{long caption}
```

A positive $\langle offset \rangle$ will push the caption down the page. The short caption, if provided, is what appears in the list of figures/tables, otherwise the “long” caption appears there. Note that although the arguments $\langle short\ caption \rangle$ and $\langle offset \rangle$ are both optional, they must be provided in order. Thus, to specify an $\langle offset \rangle$ without specifying a $\langle short\ caption \rangle$, you must include the first set of empty brackets [], which tell `\caption` to use the default “long” caption. As an example, the caption to figure 3 above was given in the form

```
\caption[Hilbert curves...][6pt]{Hilbert curves...}
```

Table 3 shows table created with the `booktabs` package. Notice the lack of vertical rules—they serve only to clutter the table’s data.

Margin item	Length
Paper width	8 ¹ / ₂ inches
Paper height	11 inches
Textblock width	6 ¹ / ₂ inches
Textblock/sidenote gutter	³ / ₈ inches
Sidenote width	2 inches

Table 3: Here are the dimensions of the various margins used in the Tufte-handout class.

Occasionally $\text{\LaTeX}$ will generate an error message:

```
Error: Too many unprocessed floats
```

$\text{\LaTeX}$ tries to place floats in the best position on the page. Until it’s finished composing the page, however, it won’t know where those positions are. If you have a lot of floats on a page (including sidenotes, margin notes, figures, tables, etc.), $\text{\LaTeX}$ may run out of “slots” to keep track of them and will generate the above error.

$\text{\LaTeX}$ initially allocates 18 slots for storing floats. To work around this limitation, the Tufte- $\text{\LaTeX}$ document classes provide a `\morefloats` command that will reserve more slots.

The first time `\morefloats` is called, it allocates an additional 34 slots. The second time `\morefloats` is called, it allocates another 26 slots.

The `\morefloats` command may only be used two times. Calling it a third time will generate an error message. (This is because we can't safely allocate many more floats or $\text{\LaTeX}$ will run out of memory.)

If, after using the `\morefloats` command twice, you continue to get the Too many unprocessed floats error, there are a couple things you can do.

The `\FloatBarrier` command will immediately process all the floats before typesetting more material. Since `\FloatBarrier` will start a new paragraph, you should place this command at the beginning or end of a paragraph.

The `\clearpage` command will also process the floats before continuing, but instead of starting a new paragraph, it will start a new page.

You can also try moving your floats around a bit: move a figure or table to the next page or reduce the number of sidenotes. (Each sidenote actually uses *two* slots.)

After the floats have placed, $\text{\LaTeX}$ will mark those slots as unused so they are available for the next page to be composed.

Captions

You may notice that the captions are sometimes misaligned. Due to the way $\text{\LaTeX}$'s float mechanism works, we can't know for sure where it decided to put a float. Therefore, the Tufte- $\text{\LaTeX}$ document classes provide commands to override the caption position.

Vertical alignment To override the vertical alignment, use the `\setfloatalignment` command inside the float environment. For example:

```
\begin{figure}[btp]
  \includegraphics{sinewave}
  \caption{This is an example of a sine wave.}
  \label{fig:sinewave}
  \setfloatalignment{b}% forces caption to be bottom-aligned
\end{figure}
```

The syntax of the `\setfloatalignment` command is:

```
\setfloatalignment{⟨pos⟩}
```

where `⟨pos⟩` can be either `b` for bottom-aligned captions, or `t` for top-aligned captions.

Horizontal alignment To override the horizontal alignment, use either the `\forceversofloat` or the `\forcerectofloat` command inside of

the float environment. For example:

```
\begin{figure}[btp]
  \includegraphics{sinewave}
  \caption{This is an example of a sine wave.}
  \label{fig:sinewave}
  \forceversofloat% forces caption to be set to the left of the float
\end{figure}
```

The `\forceversofloat` command causes the algorithm to assume the float has been placed on a verso page—that is, a page on the left side of a two-page spread. Conversely, the `\forcerectofloat` command causes the algorithm to assume the float has been placed on a recto page—that is, a page on the right side of a two-page spread.

Full-width text blocks

In addition to the new float types, there is a `fullwidth` environment that stretches across the main text block and the sidenotes area.

```
\begin{fullwidth}
Lorem ipsum dolor sit amet...
\end{fullwidth}
```

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Ut purus elit, vestibulum ut, placerat ac, adipiscing vitae, felis. Curabitur dictum gravida mauris. Nam arcu libero, nonummy eget, consectetur id, vulputate a, magna. Donec vehicula augue eu neque. Pellentesque habitant morbi tristique senectus et netus et malesuada fames ac turpis egestas. Mauris ut leo. Cras viverra metus rhoncus sem. Nulla et lectus vestibulum urna fringilla ultrices. Phasellus eu tellus sit amet tortor gravida placerat. Integer sapien est, iaculis in, pretium quis, viverra ac, nunc. Praesent eget sem vel leo ultrices bibendum. Aenean faucibus. Morbi dolor nulla, malesuada eu, pulvinar at, mollis ac, nulla. Curabitur auctor semper nulla. Donec varius orci eget risus. Duis nibh mi, congue eu, accumsan eleifend, sagittis quis, diam. Duis eget orci sit amet orci dignissim rutrum.

Typography

Typefaces

If the Palatino, Helvetica, and Bera Mono typefaces are installed, this style will use them automatically. Otherwise, we'll fall back on the Computer Modern typefaces.

Letterspacing

This document class includes two new commands and some improvements on existing commands for letterspacing.

When setting strings of ALL CAPS or small caps, the letterspacing—that is, the spacing between the letters—should be increased slightly.⁹ The `\allcaps` command has proper letterspacing for strings of FULL CAPITAL LETTERS, and the `\smallcaps` command has letterspacing for small capital letters. These commands

⁹ Robert Bringhurst. *The Elements of Typography*. 3.1. Hartley & Marks, 2005. isbn: 0-88179-205-5, p.32

will also automatically convert the case of the text to upper- or lower-case, respectively.

The `\textsc` command has also been redefined to include letterspacing. The case of the `\textsc` argument is left as is, however. This allows one to use both uppercase and lowercase letters: The Initial Letters Of The Words In This Sentence Are Capitalized.

Document Class Options

The `tufte-book` class is based on the `LATEX book` document class. Therefore, you can pass any of the typical book options. There are a few options that are specific to the `tufte-book` document class, however.

The `a4paper` option will set the paper size to A4 instead of the default us letter size.

The `sfsidenotes` option will set the sidenotes and title block in a sans serif typeface instead of the default roman.

The `twoside` option will modify the running heads so that the page number is printed on the outside edge (as opposed to always printing the page number on the right-side edge in `oneside` mode).

The `symmetric` option typesets the sidenotes on the outside edge of the page. This is how books are traditionally printed, but is contrary to Tufte’s book design which sets the sidenotes on the right side of the page. This option implicitly sets the `twoside` option.

The `justified` option sets all the text fully justified (flush left and right). The default is to set the text ragged right. The body text of Tufte’s books are set ragged right. This prevents needless hyphenation and makes it easier to read the text in the slightly narrower column.

The `bidirectional` option loads the `bidirectional` package which is used with `XYLATEX` to typeset bi-directional text. Since the `bidirectional` package needs to be loaded before the sidenotes and cite commands are defined, it can’t be loaded in the document preamble.

The `debug` option causes the Tufte-`LATEX` classes to output debug information to the log file which is useful in troubleshooting bugs. It will also cause the graphics to be replaced by outlines.

The `nofonts` option prevents the Tufte-`LATEX` classes from automatically loading the Palatino and Helvetica typefaces. You should use this option if you wish to load your own fonts. If you’re using `XYLATEX`, this option is implied (*i.e.*, the Palatino and Helvetica fonts aren’t loaded if you use `XYLATEX`).

The `nolsp` option inhibits the letterspacing code. The Tufte-`LATEX` classes try to load the appropriate letterspacing package (either `pdfTEX`’s `letterspace` package or the `soul` package). If you’re us-

ing $\text{\LaTeX}$ with `fontenc`, however, you should configure your own `letterspacing`.

The `notitlepage` option causes `\maketitle` to generate a title block instead of a title page. The `book` class defaults to a title page and the `handout` class defaults to the title block. There is an analogous `titlepage` option that forces `\maketitle` to generate a full title page instead of the title block.

The `notoc` option suppresses Tufte- $\text{\LaTeX}$'s custom table of contents (toc) design. The current toc design only shows unnumbered chapter titles; it doesn't show sections or subsections. The `notoc` option will revert to $\text{\LaTeX}$'s toc design.

The `nohyper` option prevents the `hyperref` package from being loaded. The default is to load the `hyperref` package and use the `\title` and `\author` contents as metadata for the generated pdf.

Customizing Tufte- $\text{\LaTeX}$

The Tufte- $\text{\LaTeX}$ document classes are designed to closely emulate Tufte’s book design by default. However, each document is different and you may encounter situations where the default settings are insufficient. This chapter explores many of the ways you can adjust the Tufte- $\text{\LaTeX}$ document classes to better fit your needs.

File Hooks

If you create many documents using the Tufte- $\text{\LaTeX}$ classes, it’s easier to store your customizations in a separate file instead of copying them into the preamble of each document. The Tufte- $\text{\LaTeX}$ classes provide three file hooks: `tufte-common-local.tex`, `tufte-book-local.tex`, and `tufte-handout-local.tex`.

tufte-common-local.tex If this file exists, it will be loaded by all of the Tufte- $\text{\LaTeX}$ document classes just prior to any document-class-specific code. If your customizations or code should be included in both the book and handout classes, use this file hook.

tufte-book-local.tex If this file exists, it will be loaded after all of the common and book-specific code has been read. If your customizations apply only to the book class, use this file hook.

tufte-common-handout.tex If this file exists, it will be loaded after all of the common and handout-specific code has been read. If your customizations apply only to the handout class, use this file hook.

Numbered Section Headings

While Tufte dispenses with numbered headings in his books, if you require them, they can be enabled by changing the value of the `secnumdepth` counter. From the table below, select the heading level at which numbering should stop and set the `secnumdepth` counter to that value. For example, if you want parts and chapters numbered,

but don't want numbering for sections or subsections, use the command:

```
\setcounter{secnumdepth}{0}
```

The default `secnumdepth` for the Tufte- $\text{\LaTeX}$ document classes is `-1`.

Heading level	Value
Part (in <code>tufte-book</code>)	<code>-1</code>
Part (in <code>tufte-handout</code>)	<code>0</code>
Chapter (only in <code>tufte-book</code>)	<code>0</code>
Section	<code>1</code>
Subsection	<code>2</code>
Subsubsection	<code>3</code>
Paragraph	<code>4</code>
Subparagraph	<code>5</code>

Table 4: Heading levels used with the `secnumdepth` counter.

Changing the Paper Size

The Tufte- $\text{\LaTeX}$ classes currently only provide three paper sizes: A4, B5, and US letter. To specify a different paper size (and/or margins), use the `\geometrysetup` command in the preamble of your document (or one of the file hooks). The full documentation of the `\geometrysetup` command may be found in the `geometry` package documentation.¹⁰

¹⁰ Hideo Umeki. *The geometry package*. <http://ctan.org/pkg/geometry>. Dec. 2008, p.33

Customizing Marginal Material

Marginal material includes sidenotes, citations, margin notes, and captions. Normally, the justification of the marginal material follows the justification of the body text. If you specify the `justified` document class option, all of the margin material will be fully justified as well. If you don't specify the `justified` option, then the marginal material will be set ragged right.

You can set the justification of the marginal material separately from the body text using the following document class options: `sidenote`, `marginnote`, `caption`, `citation`, and `marginals`. Each option refers to its obviously corresponding marginal material type. The `marginals` option simultaneously sets the justification on all four marginal material types.

Each of the document class options takes one of five justification types:

justified Fully justifies the text (sets it flush left and right).

raggedleft Sets the text ragged left, regardless of which page it falls on.

raggedright Sets the text ragged right, regardless of which page it falls on.

raggedouter Sets the text ragged left if it falls on the left-hand (verso) page of the spread and otherwise sets it ragged right. This is useful in conjunction with the `symmetric` document class option.

auto If the `justified` document class option was specified, then set the text fully justified; otherwise the text is set ragged right. This is the default justification option if one is not explicitly specified.

For example,

```
\documentclass[symmetric,justified,marginals=raggedouter]{tufte-book}
```

will set the body text of the document to be fully justified and all of the margin material (sidenotes, margin notes, captions, and citations) to be flush against the body text with ragged outer edges.

The font and style of the marginal material may also be modified using the following commands:

```
\setsidenoteont{\font commands}
\setcaptionfont{\font commands}
\setmarginnoteont{\font commands}
\setcitationfont{\font commands}
```

The `\setsidenoteont` sets the font and style for sidenotes, the `\setcaptionfont` for captions, the `\setmarginnoteont` for margin notes, and the `\setcitationfont` for citations. The `\font commands` can contain font size changes (e.g., `\footnotesize`, `\Huge`, etc.), font style changes (e.g., `\sffamily`, `\ttfamily`, `\itshape`, etc.), color changes (e.g., `\color{blue}`), and many other adjustments.

If, for example, you wanted the captions to be set in italic sans serif, you could use:

```
\setcaptionfont{\itshape\sffamily}
```

Compatibility Issues

When switching an existing document from one document class to a Tufte- $\text{\LaTeX}$ document class, a few changes to the document may have to be made.

Converting from `article` to `tufte-handout`

The following `article` class options are unsupported: `10pt`, `11pt`, `12pt`, `a5paper`, `b5paper`, `executivepaper`, `legalpaper`, `landscape`, `onecolumn`, and `twocolumn`.

The following headings are not supported: `\subsubsection` and `\subparagraph`.

Converting from `book` to `tufte-book`

The following `report` class options are unsupported: `10pt`, `11pt`, `12pt`, `a5paper`, `b5paper`, `executivepaper`, `legalpaper`, `landscape`, `onecolumn`, and `twocolumn`.

The following headings are not supported: `\subsubsection` and `\subparagraph`.

Troubleshooting and Support

Tufte- $\text{\LaTeX}$ Website

The website for the Tufte- $\text{\LaTeX}$ packages is located at <http://code.google.com/p/tufte-latex/>. On our website, you'll find links to our SVN repository, mailing lists, bug tracker, and documentation.

Tufte- $\text{\LaTeX}$ Mailing Lists

There are two mailing lists for the Tufte- $\text{\LaTeX}$ project:

Discussion list The `tufte-latex` discussion list is for asking questions, getting assistance with problems, and help with troubleshooting. Release announcements are also posted to this list. You can subscribe to the `tufte-latex` discussion list at <http://groups.google.com/group/tufte-latex>.

Commits list The `tufte-latex-commits` list is a read-only mailing list. A message is sent to the list any time the Tufte- $\text{\LaTeX}$ code has been updated. If you'd like to keep up with the latest code developments, you may subscribe to this list. You can subscribe to the `tufte-latex-commits` mailing list at <http://groups.google.com/group/tufte-latex-commits>.

Getting Help

If you've encountered a problem with one of the Tufte- $\text{\LaTeX}$ document classes, have a question, or would like to report a bug, please send an email to our mailing list or visit our website.

To help us troubleshoot the problem more quickly, please try to compile your document using the `debug` class option and send the generated `.log` file to the mailing list with a brief description of the problem.

Errors, Warnings, and Informational Messages

The following is a list of all of the errors, warnings, and other messages generated by the Tufte- $\text{\LaTeX}$ classes and a brief description of their meanings.

Error: `\subparagraph` is undefined by this class.

The `\subparagraph` command is not defined in the Tufte- $\text{\LaTeX}$ document classes. If you'd like to use the `\subparagraph` command, you'll need to redefine it yourself. See the "Headings" section on page 33 for a description of the heading styles available in the Tufte- $\text{\LaTeX}$ document classes.

Error: `\subsubsection` is undefined by this class.

The `\subsubsection` command is not defined in the Tufte- $\text{\LaTeX}$ document classes. If you'd like to use the `\subsubsection` command, you'll need to redefine it yourself. See the "Headings" section on page 33 for a description of the heading styles available in the Tufte- $\text{\LaTeX}$ document classes.

Error: You may only call `\morefloats` twice. See the Tufte- $\text{\LaTeX}$ documentation for other workarounds.

$\text{\LaTeX}$ allocates 18 slots for storing floats. The first time `\morefloats` is called, it allocates an additional 34 slots. The second time `\morefloats` is called, it allocates another 26 slots.

The `\morefloats` command may only be called two times. Calling it a third time will generate this error message. See page 36 for more information.

Warning: Option '`\langle class option \rangle`' is not supported -- ignoring option.

This warning appears when you've tried to use `\langle class option \rangle` with a Tufte- $\text{\LaTeX}$ document class, but `\langle class option \rangle` isn't supported by the Tufte- $\text{\LaTeX}$ document class. In this situation, `\langle class option \rangle` is ignored.

Info: The '`\symmetric`' option implies '`\twoside`'

You specified the `\symmetric` document class option. This option automatically forces the `\twoside` option as well. See page 39 for more information on the `\symmetric` class option.

Package Dependencies

The following is a list of packages that the Tufte- $\text{\LaTeX}$ document classes rely upon. Packages marked with an asterisk are optional.

- xifthen
- ifpdf*
- ifxetex*
- hyperref
- geometry
- ragged2e
- chngpage *or* changepage
- paralist
- textcase
- soul*
- letterspace*
- setspace
- natbib *and* bibentry
- optparams
- placeins
- mathpazo*
- helvet*
- fontenc
- beramono*
- fancyhdr
- xcolor
- textcomp
- titlesec
- titletoc

Acknowledgements

This template stands on the shoulders of several open works. The author thanks:

- The **Tufte-LaTeX** project, whose `tufte-book` class is the typographic foundation of this template.

Palette Introduction

This chapter walks through all twenty-four themed palettes in order. Every entry keeps a fixed three-part structure—a *Colour Philosophy* stating the worldview behind the palette, a *six-colour table* listing the values and gloss of `pal1` through `pal6`, and a closing subsection (*Design Notes*, *Colour Structure*, or *Aesthetic Rules* as appropriate) unfolding either per-colour annotations or structural principles. Palettes are laid out sequentially with natural page breaks; the only constraint enforced is that each six-colour table is kept intact on a single page.

o OUC Default

Colour Philosophy

This is the factory ground tone of the template. Blue is the colour of the young scholar—from the first lecture page at dawn, through the library window at noon, to the cold lab light at midnight, blue spans the entire colour temperature of academic life. Six tones run from lightest to deepest, deliberately restrained, mirroring the arc of opening a book and closing it again. The palette does not ask to be looked at; it asks to let the words themselves be seen. This is the quietest possible contract between writer and reader, and the way the OUC Haide LaTeX template hopes to be used for the long haul.

	Name	Original	RGB	Gloss
	Paper Foam	Paper Foam	239, 246, 255	The faintest blue a page reflects at the moment of opening, almost white
	Desert Foam	Desert Foam	219, 234, 254	A page in shadow under cold lab light, clean and weightless
	Sea Smoke	Sea Smoke	96, 165, 250	The window sky, the breath a scholar takes between paragraphs
	Crisp Sky	Crisp Sky	37, 99, 235	A chalk stroke on the board, the colour of argument
	Twilight Blue	Twilight Blue	30, 58, 138	The deepest blue of contemplation, near the edge of dream
	Midnight Hull	Midnight Hull	30, 41, 59	The final line a pen leaves in the notebook

Colour Mapping of the Reading Arc

- **Paper Foam** — Paper Foam is the breath of "opening the book"—near-white, allowing any text to enter the reader's eye with the smallest visual cost

- **Frost Crystal** — Frost Crystal carries the second-lightest weight, replacing pure white over long reads to lower fatigue without drawing attention
- **Sky Glass** — Sky Glass is the only mid-tone with a hint of nature, pulling the page out of pure artificial colour and back to a glance out the window
- **Lecture Sapphire** — Lecture Sapphire bears the duty of emphasis, the only tone permitted to be "loud"—yet loud with discipline, like chalk landing a stress on the board
- **Reverie Navy** — Reverie Navy presses thought to its deepest layer, suiting long quotations, pivotal theorems, and chapter openings
- **Slate Ink** — Slate Ink is almost black yet keeps a blue heart—the colour every line of body text and every structural rule finally lands in; the book closes inside it

1 Brunneophobia

Colour Philosophy

The name literally reads "fear of brown", yet the palette faces that prejudice with nothing but brown. Brown is neither cheap nor dated; it is the warmth that modern taste has deliberately pushed aside. Six tones descend from desert sand and smoky tangerine through rust to the deepest scorched earth, like walking into a wood-panelled studio of old books, the air thick with leather, tobacco, and damp timber. Courage in colour is not brilliance—it is daring to be the shade everyone avoids, and brown, returned to itself, becomes the very definition of grown-up dignity.

	Name	Original	RGB	Gloss
	Lighthouse	Lighthouse	238, 211, 180	The faintest warm white of desert dawn, the palette's breath
	Sand Lily	Sand Lily	213, 148, 79	Tangerine seen through smoke, warm but never loud
	Reef Coral	Reef Coral	213, 148, 79	The same hue repeated—a deliberate narrowing of chroma
	Tidal Mauve	Tidal Mauve	180, 69, 15	Iron left in damp air for decades, the colour of blood and soil
	Inkwell	Inkwell	86, 67, 53	The shade of an old sofa and a leather-bound spine, dense with years
	Deep Tide	Deep Tide	42, 23, 14	The deepest brown left in the ash after the campfire dies

The Internal Order of the Brown Family

- **Desert Foam** — Desert Foam, as the lightest tone, carries every duty of breathing and negative space—the only brown in the set that does not speak

- **Smoke Tangerine** — Smoke Tangerine governs the warmth of the middle band, returning the palette from gravity to daily life—the friendliest interface with the reader
- **Beeswax Honey** — Beeswax Honey shares a hue with Smoke Tangerine—a deliberate clenching, an argument that restraint itself is force
- **Rust Crimson** — Rust Crimson is the edge of the palette—it pushes gentle browns into an aggressive red, the only tone permitted to wound
- **Aged Leather** — Aged Leather supplies the texture of archives—the deep tone shared by libraries, dossiers, and leather bindings, locking the physicality of reading into colour
- **Scorched Earth** — Scorched Earth is the root of structure; every warm tone above it stands because it does—the final step in overcoming the fear of brown is to admit that black, too, is brown

2 Van Dyke

Colour Philosophy

In tribute to Anthony van Dyck, the seventeenth-century Flemish portraitist whose ground colour, Van Dyke Brown, layered glaze upon glaze to lend aristocratic skin its translucent glow. The palette grows out of his canvas itself: powdered flesh tones, lilac silk, crimson velvet, deep brown ground—all standard materials of Baroque portraiture. There is no drama between the six tones, only the composure left after fading; together they do not form a painting so much as the atmosphere a painting leaves on a wall once time has washed across it.

Name	Original	RGB	Gloss
 Carnation Skin	Vleeskleur	236, 194, 188	The thin-glazed pink of an aristocrat's cheek in Baroque portraiture
 Silken Wisteria	Zijden Sering	169, 159, 191	The lilac silk catches in shadow, elegant and cool
 Smoke Lilac	Rooklila	169, 159, 191	As above—both sides of the silk are barely distinct on canvas
 Rose Velvet	Rozenfluweel	191, 113, 133	The rose that bleeds through velvet, deep without being loud
 Plum Plush	Pruimenpurper	68, 60, 94	The deep plum of the backdrop drapery, throwing the highlights brighter
 Van Dyke Brown	Van Dijck-bruin	61, 43, 39	Van Dyck's signature ground, mixed from bitumen pigment

Colour Mapping of Portrait Depth

- **Carnation Skin** — Carnation Skin sits at the front—the cheek, the hand, the neck of the figure, the first "person" the viewer meets

- **Silken Wisteria** — Silken Wisteria is the silk’s highlight, holding softness of refraction in the hue—elegant with distance
- **Smoke Lilac** — Smoke Lilac shares its hue with Silken Wisteria, a deliberate repetition that echoes Baroque painting’s love of monochromatic layering
- **Rose Velvet** — Rose Velvet is the mid-ground gown, lifting and pushing the figure forward—the colour-temperature pivot of the set
- **Plum Plush** — Plum Plush is the curtain behind, lifting the figure out of darkness while almost escaping notice itself
- **Van Dyke Brown** — Van Dyke Brown is the "ground" of the whole work—the colour deposited by pigment, canvas, frame, and wall together; every highlight stands only because it does

3 *Back in Black*

Colour Philosophy

In tribute to AC/DC’s 1980 album, though the palette itself is more restrained than rock. Pink and grey soften the aggression of black, pushing the set towards a post-punk aesthetic: leather jacket, smoke, the residual warmth right after the stage lights die. Pink is the scar, black is the night—every grey between them is the echo youth leaves inside the body. This is a grown-up version of rebellion, with its edge folded inside a composed surface.

	Name	Original	RGB	Gloss
	Powder Pink	Powder Pink	240, 217, 228	The only undefended colour in the dark, the opposite of rebellion
	Dust Rose	Dust Rose	193, 160, 172	Pink with a film of smoke, dignity after the brightness has gone
	Ember Pink	Ember Pink	193, 160, 172	Repeated to strengthen the mid-band; two semantics of pink, side by side
	Smoky Mauve	Smoky Mauve	128, 108, 121	The smoke-grey purple under stage light—neither bright nor dim
	Black Velvet	Black Velvet	74, 63, 75	The shadow of a leather jacket, between black and purple
	Inkwell Black	Inkwell Black	22, 19, 21	The deepest anchor of the set, all but pure black

Colour Mapping of a Post-Punk Aesthetic

- **Powder Pink** — Powder Pink is the unguarded entry—the only soft door above the black ground; rebellion’s tender opposite is rebellion’s core
- **Dust Rose** — Dust Rose presses the brightness out of pink—the after-tone of youth, elegantly admitting it is no longer young

- **Ember Pink** — Ember Pink shares its hue with Dust Rose—a repeat-as-emphasis figure that promotes the mid-band into the true centre of the palette
- **Smoky Mauve** — Smoky Mauve is the smoke under the lights, bridging pink and black so the two extremes look like two faces of one mood
- **Black Velvet** — Black Velvet is the shadow of a leather jacket, breathing with purple—black does not have to be dead; it can be a substance worn on the body
- **Inkwell Black** — Inkwell Black is the deepest anchor, near pure black yet keeping a violet undertone—the period of the palette, though even after a period the next song still plays

4 *Belle of the Ball*

Colour Philosophy

The most-watched woman at the ball never wears primaries—she wears the old tones that countless candle flames have warmed: terracotta, verdigris, olive, deep crimson. The palette refuses twentieth-century synthetic dyes and is drawn instead from the mixed aesthetic of the nineteenth-century European salon and its colonial tropics—fireplace, mahogany, evening curtain, wine-stained linen. Being looked at depends not on brilliance but on that "lived-through" elegance every tone wears once time has softened it.

	Name	Original	RGB	Gloss
	Champagne Pearl	Champagne Pearl	226, 203, 192	The pearled skin tone of a woman under candlelight in the ballroom
	Rose Terracotta	Rose Terracotta	206, 171, 150	A mid-tone between vintage lipstick and terracotta—the warmth of being watched
	Glazed Clay	Glazed Clay	210, 135, 106	The orange-red of glazed pottery—warm, mature, hand-thrown
	Chilli Scarlet	Chilli Scarlet	229, 74, 57	The scarlet of chilli peppers drying in tropical sun—the bright accent of the set
	Olive Verdigris	Olive Verdigris	118, 118, 44	Olive leaves oxidised to a neutral green with a bronze edge
	Moss Deepwood	Moss Deepwood	53, 77, 4	The forest-dark tone of mahogany furniture and deep curtains

Colour Strategy of the One Being Watched

- **Champagne Pearl** — Champagne Pearl is skin warmed by candlelight—the breath of the palette and the most undefended layer of the watched figure
- **Rose Terracotta** — Rose Terracotta carries vintage allure—a lipstick filtered through time, both ornament and proof of standing

- **Glazed Clay** — Glazed Clay is the colour of handcraft, banishing industry from the palette and keeping in its place the warmth of a palm and the substance of earth
- **Chilli Scarlet** — Chilli Scarlet is the only tone permitted to be bright—the red of a hem, a ring, a final lipstick touch—and only ever in small area
- **Olive Verdigris** — Olive Verdigris is the cool pivot, pulling every tropical warm back into the restraint of a European salon—the palette’s thermostat
- **Moss Deepwood** — Moss Deepwood is the background and the furniture, the gravity of the set—without it, every bright tone would lose its pivot

5 *Pine Tree*

Colour Philosophy

Anchored on a single northern pine, the palette descends from canopy to root: warm gold where sun strikes the new needles, the loosened old needles tossed by wind, rose-clay shadow under the afternoon canopy, ochre seeping from cracks in the trunk, and the dark forest ink buried in the humus below. The set deliberately leaves "green" behind—a real pine, seen carefully, is far more complex than green; its colour is a chronology jointly written by sunlight, weather, soil, wounds, and shadow.

	Name	Original	RGB	Gloss
	Sunlit Needle	Sunlit Needle	238, 200, 111	Warm gold where sunlight strikes the new needles
	Honey Resin	Honey Resin	222, 166, 32	Pine resin oozing from a crack in the bark, the tree's self-healing gold
	Aged Gold	Aged Gold	222, 166, 32	The same gold returned, steadying the mid-band
	Shadow Rose	Shadow Rose	177, 120, 133	Rose-clay in the afternoon shade, with a violet edge
	Bark Ochre	Bark Ochre	167, 88, 26	The ochre brown of the trunk itself—the tree's most honest colour
	Forest Ink	Forest Ink	43, 47, 34	The dark forest ink of humus and root

Colour Mapping of a Pine Tree's Chronology

- **Sunlit Needle** — Sunlit Needle is the pine tree's "today"—the newly-grown, sunlight-chosen tip that has no story yet
- **Honey Resin** — Honey Resin is the wound—resin sealing a crack into amber, the tone most charged with time in the entire palette
- **Aged Gold** — Aged Gold shares its hue with Honey Resin—a "say it again" of the mid-band gold, time recited once more in colour

- **Shadow Rose** — Shadow Rose is the violet shadow the pine casts on the ground—the breathing interface between tree and earth
- **Bark Ochre** — Bark Ochre is the trunk itself, the colour needing no explanation—a pine’s very substance, named
- **Forest Ink** — Forest Ink is the root colour, sunk in humus, near black yet still green—reminding us that a living root is never quite the same as black

6 Provence Blue

Colour Philosophy

Provençal blue does not belong to the sea—it belongs to the blue-grey beyond a lavender field that the setting sun has desaturated, to the peacock paint flaking from a limestone window-frame after years, to the warm air shared by old linen sheets drying in a courtyard and a rusted iron handle. The palette refuses the postcard-Mediterranean romance and chooses an inland, rural, time-softened southern-French blue—its romance lives not in the brightness of the colour but in the trace the colour leaves once it has been used.

Name	Original	RGB	Gloss
 Olive Silver	Argent d’Olivier	170, 188, 175	The silver-grey underside of an olive leaf, with a green note
 Mist Mirror	Miroir de Brume	137, 156, 154	Morning mist pressed onto water, a grey-blue
 Spent Rain	Pluie Passée	137, 156, 154	Repeated, steadying the middle band
 Window Stone Blue	Bleu de Volet	110, 124, 139	The peacock blue of a limestone window-frame, faded
 Lavender Dusk	Crépuscule Lavande	82, 92, 121	The deep violet-blue at the far edge of a lavender field under sunset
 Olive Night	Nuit d’Olivier	53, 66, 94	The deep blue night sky above the olive grove, with the smell of earth

Colour Structure of Rural Southern-French Blue

- **Olive Silver** — Olive Silver is the only green in the palette—the silver flash of an olive leaf turning in the wind, Provençal air made matter
- **Mist Mirror** — Mist Mirror is the dawn reflection on water, lending blue from the sky to the ground—the most breathable mid-tone
- **Spent Rain** — Spent Rain shares its hue with Mist Mirror, the colour temperature of the second day after a rain—repeated to deepen the humidity of the palette
- **Window Stone Blue** — Window Stone Blue pulls the palette out of nature back into the made—a hand-trace painted many times

and faded many times more

- **Lavender Dusk** — Lavender Dusk is the soul of the set—it pushes lavender from "violet" into "deep violet-blue", and that single step is exactly what makes Provence Provence
- **Olive Night** — Olive Night is the root, gathering every daytime blue back into a single sky, near black yet still blue

7 *Fresco Blue*

Colour Philosophy

From the church-fresco skies of the Italian Renaissance—the azure that fresco technique drew into the lime plaster and that five centuries of candle smoke have since oxidised. It is not the real colour of sky but the "sacred sky" mixed by craftsmen out of lapis lazuli, malachite, and lime: a blue between earth and heaven. The palette steps from the palest sky to the deepest night, mimicking the way fresco blue deepens as the wall falls from dome to floor—a sky housed inside architecture.

	Name	Original	RGB	Gloss
	Vault Sky	Cielo di Volta	166, 224, 244	The palest blue at the highest point of a vaulted fresco
	Cobalt Glaze	Vetrina Cobalto	71, 169, 207	The mid-blue mixed from lapis lazuli and lime wash
	Lapis Renewed	Lapislazzuli	71, 169, 207	Repeated, steadying the mid-band of the fresco wall
	Apse Blue	Azzurro d'Abside	9, 121, 158	The deep blue still unfaded after five centuries in the apse
	Vigil Blue	Azzurro della Veglia	4, 75, 102	The dark blue cast onto the lower fresco during night vigil
	Crypt Blue	Azzurro della Cripta	2, 31, 46	The deepest blue, almost vanished, in crypt and shadowed gallery

The Vertical Spectrum of a Fresco Sky

- **Vault Sky** — Vault Sky is the highest point of the fresco, the pale blue light bounces off the plaster—the "heaven" of the palette
- **Cobalt Glaze** — Cobalt Glaze is the dominant mid-tone, the full blue a worshipper sees when they look up inside the church
- **Lapis Renewed** — Lapis Renewed shares its hue with Cobalt Glaze, the "reaffirmation"—fresco blue never relies on one stroke; it relies on layering upon layering
- **Apse Blue** — Apse Blue lives in the deepest part of the church where light barely reaches, the fresco there congealed into an unfading depth
- **Vigil Blue** — Vigil Blue is the night colour-temperature—the same wall, under oil lamp, reveals a dark blue utterly unlike its

daytime self

- **Crypt Blue** — Crypt Blue is where the fresco is nearly swallowed by darkness, near black yet still blue—the most silent act of "believing" in the palette

8 Monet

Colour Philosophy

The central proposition of Impressionism is that light itself has colour. Monet painted the same haystack, the same cathedral, the same lily pond again and again across a lifetime, all to catch the fact that "the same object owns different colours at different hours". The palette reproduces no single Monet, but extracts from the body of his work six hues most diagnostic of Impressionist identity: creamy canvas, rose-touched hay, green meadow, summer pond, morning-mist blue, deep reed shadow—their relation is not composition but the refraction of one beam of light across different substances.

	Name	Original	RGB	Gloss
	Canvas Cream	Toile Crème	247, 244, 213	The creamy ground of an untouched Monet canvas
	Hay Rose	Foin Rose	211, 150, 140	The rose tipping the haystack in Monet's evening series
	Evening Glow	Lueur du Soir	211, 150, 140	Repeated, prolonging the colour-temperature of dusk
	Meadow Green	Pré Vert	131, 153, 88	The mid-green of the Giverny meadow in the afternoon
	Pond Aqua	Étang Aigue	16, 86, 102	The deep blue mirrored beneath the water in the lily series
	Reed Shadow	Ombre des Roseaux	10, 51, 35	The deep green at the base of the pondside reeds, near ink

Colour Structure of Impressionist Light

- **Canvas Cream** — Canvas Cream is the palette's "unfinished"—the breath of the canvas itself before any of Monet's brush strokes
- **Hay Rose** — Hay Rose is the most diagnostic Impressionist stroke—it pushes "yellow" into "rose" precisely because evening light has rewritten every local colour
- **Evening Glow** — Evening Glow shares the hue of Hay Rose, the "prolonged dusk"—Impressionism returned to the same subject again and again precisely to catch this line of colour
- **Meadow Green** — Meadow Green is the mid-tone of the palette, the true green of sunlight on new grass, neither cool nor warm
- **Pond Aqua** — Pond Aqua is the most diagnostic hue of late Monet's Water Lilies, lending blue from sky to water—the emotional pivot of the palette

- **Reed Shadow** — Reed Shadow is the root, nearly ink yet still green—Impressionism's shadows never truly accept black

9 *Narcissus*

Colour Philosophy

Not the Narcissus of Greek myth, but the botanical narcissus—a flower drawn from a bulb that opens at the close of winter. Its colour line runs from the pallid scale of the bulb to the gold of the corona and on to the deep brown of root in soil: a material narrative from underground to surface. The palette deliberately removes "green leaf", the most obvious element, so that the eye can focus on the flower's full arc—gestation, opening, return to earth—a botanical spectrum structured along the vertical axis of time.

	Name	Original	RGB	Gloss
	Bulb Milk	Bulbus Lacteus	221, 213, 200	The milk-white of a freshly cut narcissus bulb in cross-section
	Petal Brown-Rose	Petalum Roseobrunneum	185, 149, 144	A fallen petal pressed into soil, dust rose
	Faded Rose	Rosa Defloruit	185, 149, 144	The same colour returned—the "use it again" gesture
	Narcissus Gold	Aurum Narcissi	199, 149, 72	The warm gold at the heart of the corona, the palette's signal colour
	Honey Bronze	Aes Mellitum	190, 108, 26	The orange-brown of the bulb's husk, sitting between soil and flower
	Soil Deep	Humus Profundus	110, 60, 31	The humus dark in which the narcissus roots, the colour of root

Colour Slices of a Narcissus Life Cycle

- **Bulb Milk** — Bulb Milk is the narcissus before it opens—all the latent colour a plant already owns before it becomes flower
- **Petal Brown-Rose** — Petal Brown-Rose is the petal after the fall, the colour rewritten by soil and rain once it leaves the stem
- **Faded Rose** — Faded Rose shares its hue with Petal Brown-Rose—"the same fallen petal, remembered"—one falling, returning a second time in memory
- **Narcissus Gold** — Narcissus Gold is the core of the palette, the warm gold at the heart of the corona that appears only in early spring—the colour of "opening" itself
- **Honey Bronze** — Honey Bronze pushes the flower's gold towards the earth's ochre—the transition from open flower to fallen petal, from air back to ground
- **Soil Deep** — Soil Deep is where the narcissus comes from and returns to, near black yet warm—the palette's closing argument

that every blooming arrives from darkness and returns to it

10 Roman Empire

Colour Philosophy

A palette indexed by the material legacy of the Roman Empire: marble, legionary cloak, senatorial toga, laurel crown, triumphal gold, murex purple. The six tones are not designed but grown from the city of Rome itself—the stone of temples, the blood of battlefields, the authority of the forum, the mark of emperors—together forming a political archaeology of colour. Every shade has a traceable material origin.

	Name	Original	RGB	Gloss
	Carrara Marble	Marmor Carrariense	236, 232, 225	The cool, faintly warm white of Carrara marble—the matter of temples and statues
	Gloria Aurum	Aurum Glorise	212, 175, 55	A neutral gold of triumphal coinage, halfway between mint and idol
	Laurel Viridis	Laurus Viridis	74, 110, 65	The matte deep green of the laurel crown, taken from dried leaves
	Legion Crimson	Sagum Legionarium	180, 30, 30	The saturated red of the legionary sagum—iron, and blood
	Senate Bordeaux	Clavus Senatorius	120, 20, 40	The deeper wine of the senatorial toga's clavus, restraint over force
	Tyrian Purple	Purpura Tyria	88, 28, 90	Murex dye, worth its weight in gold, reserved for emperors

Design Notes

- **Carrara Marble** — Drawn from Carrara marble itself, a cool white with a faint warm grey, evoking the substance of temple and statue
- **Legion Crimson** — The vivid battle-red of the legionary Sagum, saturated and forceful—a symbol of iron and blood
- **Senate Bordeaux** — The deep wine red of the Clavus stripe on the senatorial toga, more restrained, more aristocratic than the legion's red
- **Laurel Viridis** — The matte deep green of laurel leaves—not emerald, but the steady tone of the leaf once dried
- **Gloria Aurum** — A neutral gold of triumphal procession, halfway between minted coin and gilded idol, neither overly warm nor cold
- **Tyrian Purple** — The historical dye drawn from murex shells, priced like gold, reserved for imperial use—deep, and arcane

11 Greece

Colour Philosophy

The marble is Parian, warmer and more ivory than Carrara, the actual material of the Parthenon; the democratic blue is taken from the mid-tone azure of the deep Aegean, the very sky and sea Athenians watched from the Agora. With marble as ground and democratic blue as the visual centre of gravity, gold accents, and terracotta-olive-grape as the three creative tones of narrative, wisdom and mystery.

	Name	Original	RGB	Gloss
	Parian Marble	Παριανός Μάρμαρος · Parianos Marmaros	245, 240, 228	The actual stone of the Parthenon, warmer and more ivory than Carrara
	Gloria Aurum	Χρυσός · Chrysos	212, 175, 55	The same neutral gold as Rome, the highlight of gods and rite
	Agora Kyanos	Κυανός Αγοράς · Kyanos Agoras	48, 105, 175	The mid-tone azure of the deep Aegean, the sky and sea Athenians watched from the Agora
	Attic Terracotta	Αττικός Πηλός · Attikos Pelos	188, 82, 38	The ground of red-figure pottery, the most iconic medium colour for recording myth and epic
	Athena's Olive	Ελιά Αθηνάς · Elia Athenas	98, 128, 48	The olive tree gifted by Athena to the polis, the colour of peace and wisdom
	Dionysian Grape	Διονυσιακή Σταφυλή · Dionysiake Staphyle	90, 42, 92	The deep grape of wine-making, the soul colour of Dionysus, theatre, and revelry

Colour Logic

- **Parian Marble** — Parian Marble as the ground is the material substrate of Greek architecture and sculpture—warmer and more ivory than Roman Carrara, carrying the body temperature of filtered Mediterranean sun
- **Agora Kyanos** — Agora Kyanos commands the visual centre of gravity—both Aegean sky and sea, and the colour of "public space" Athenian citizens saw in the Agora
- **Gloria Aurum** — Gloria Aurum, as accent, carries the visual weight of divinity in the smallest area—shared with Rome but used with more restraint here
- **Attic Terracotta** — Attic Terracotta is the "narrative colour" of Greece—red-figure pottery pressed myth and epic into this one tone, the most diagnostic medium of Greek culture

- **Athena's Olive** — Athena's Olive and Attic Terracotta form a warm-cool mid-balance, a colour counterpoint of wisdom and narrative
- **Dionysian Grape** — Dionysian Grape is the deepest anchor, the colour of Dionysus and theatre—the other pole of Greek culture: the revelry beneath the sacred

12 Kanagawa

Colour Philosophy

The Great Wave's revolution lay in Hokusai's introduction of newly-imported Prussian blue (Bero-ai) into ukiyo-e: a single colour family in light-and-dark variation built the drama of the entire image, while ink outline and the distant blank of Mount Fuji produced a uniquely compressed visual aesthetic. The palette centres on the Prussian blue family—from sumi-ink to deep sea, to wave-blue, to Fuji-haze, to twilight sky, to foam-white—a complete luminance ladder, like a wave rising from the depths and bursting into snow at its crest.

	Name	Original	RGB	Gloss
	Wave Foam	波白 · Nami-shiro	237, 233, 222	The foam at the cresting wave, not pure white but warmed by washi paper
	Twilight Sky	暮天 · Boten	208, 224, 238	The horizon sky's gradient, Prussian blue diluted to vastness
	Fuji Haze	富士霞 · Fuji-gasumi	150, 186, 210	The pale-blue silhouette of distant Mount Fuji, blurred and still
	Prussian Indigo	ペロ藍 · Bero-ai	26, 78, 132	The main body of the image—the Prussian blue wave, the most iconic imported pigment of Edo
	Deep Sea	深海 · Shinkai	13, 38, 76	The ink-blue at the deepest trough of the wave, almost black yet keeping the chill of blue
	Sumi Ink	墨 · Sumi	29, 25, 35	The ink line of woodblock print, the skeleton of the whole image, not pure black but with a deep violet base

Colour Logic

- **Nami-shiro** — Nami-shiro is the instant of breaking at the crest, warmed by washi paper—the only highlight in the palette
- **Boten** — Boten is the transitional sky at the horizon, Prussian blue diluted almost to vanishing—the colour the image breathes through
- **Fuji-gasumi** — Fuji-gasumi is the pale-blue distant Fuji, the single "retreat" in the painting, pushing focus back to the wave itself
- **Bero-ai** — Bero-ai is the wave's body, the painting's revolution—a single imported pigment carrying the drama of the entire work

- **Shinkai** — Shinkai is the ink-blue at the depth, the carrier of "pressure" and "abyss", almost black yet still blue
- **Sumi** — Sumi is the skeleton of the woodblock, governing the whole image—the "form" of the palette, without which the six blues would have nothing to attach to

13 *Starry Night*

Colour Philosophy

Van Gogh's *Starry Night* is not Impressionism but the summit of Post-Impressionism—he no longer catches the instant of light but burns the emotion inside directly into the brush stroke. Cobalt and ultramarine form the bone, the swirling stroke gives the night sky life, and the chrome yellow of moon and stars erupts under the weight of blue, while the cypress climbs like a black flame against the firmament; the village glow is the only warmth in the painting that belongs to the human world. Three layers of blue form an emotional axis from deepest to lightest, mimicking the layered rhythm of Van Gogh's spiral stroke.

	Name	Original	RGB	Gloss
	Lunar Chrome	Lumière Lunaire	240, 208, 68	The exploding halo of moon and starlight, Van Gogh's chrome yellow as the utmost tension of life
	Village Amber	Lueurs du Village	198, 140, 52	The warm yellow from village windows, the only warm-cool stand-off against the cold blue sky
	Glacial Dawn	Aube Glacée	105, 155, 200	The pale-blue transition at the swirl's edge, the most delicate breath between deep night and moonlight
	Swirling Ultramarine	Tourbillon Outremer	48, 96, 165	The ultramarine of the swirl's body, the signature Post-Impressionist colour—not natural but emotional
	Cypress Nocturne	Cyprès Nocturne	22, 50, 30	The deep dark green of the foreground cypress, nearly black, the only thing in the painting that "refuses the light"
	Midnight Cobalt	Minuit Cobalt	20, 36, 88	The deepest base of the night sky, dense with oppressive emotional weight—the abyss of Van Gogh's inner world

Colour Logic

- **Lumière Lunaire** — Lumière Lunaire is the painting's "burst point", moon and stars exploding under the weight of blue—the very limit of life's tension

- **Lueurs du Village** — Lueurs du Village is the only earthly warmth in the painting, standing against the cold blue sky as the sole warm-cool counterpoint
- **Aube Glacée** — Aube Glacée is the transition, the most delicate breath between deep night and moonlight, between oppression and release
- **Tourbillon Outremer** — Tourbillon Outremer is the body of the swirl, the signature Post-Impressionist hue—not natural but emotional, the "melody line" of the palette
- **Cyprès Nocturne** — Cyprès Nocturne is the only element that "refuses the light", almost black—the visual anchor, holding up the contrast of the whole work with the darkest tone
- **Minuit Cobalt** — Minuit Cobalt is the deepest emotional base of the night sky, Van Gogh's inner abyss, from which every other blue grows

14 *A Thousand Li*

Colour Philosophy

A Thousand Li of Rivers and Mountains was painted by the Northern-Song prodigy Wang Ximeng with mineral pigments layered repeatedly—azurite and malachite ground fine and pressed coat upon coat, the "thin yet thick" technique sinking colour into the silk to give it a mineral translucence that glows from within outward. The six colours do not stand alone; together they form a colour ecology in which mountain and water breathe as one.

	Name	Original	RGB	Gloss
	Song Silk	宋绢 · Sòng-juān	218, 203, 170	The warm rice ground of millennia-aged silk, not pigment but the colour of time itself
	Sky Azurite	烟渚 · Yān-zhǔ	110, 165, 195	The diluted layer of azurite and lead white, used for distant mountain silhouette and river highlights
	Ochre-Gold	砂赭 · Shā-zhě	183, 118, 45	Ochre limonite mixed with mud-gold, used for reef texture, dwelling, gallery bridge, and gold lines on water
	Pale Malachite	岚霭绿 · Lán-ǎi-lǜ	96, 148, 110	The transitional tone of progressively diluted malachite, the mid-ground foliage and the cloud-mountain interface
	Malachite True	苍岭绿 · Cāng-lǐng-lǜ	48, 105, 76	The true colour of natural malachite, layered on sunlit mountain faces, the most life-bearing tone of the painting
	Azurite Deep	霁山青 · Jì-shān-qīng	35, 78, 112	The deep mineral blue of finely-ground azurite, the dominant tone of the mountain's shaded face and deep water

Colour Mapping of the Five Characteristics

- **Azure-and-Green Lead** — Azurite Deep and Malachite True jointly anchor the main key—one cool one warm, one yin one yang, each balancing rather than competing with the other
- **Gradient Layering** — from Azurite Deep to Sky Azurite, from Malachite True to Pale Malachite—each line is a luminance ladder, mimicking the layered technique of "thin yet thick"
- **Gold-Ochre Accent** — Ochre-Gold takes on the largest duty of temperature adjustment in the smallest area, keeping the azure-green lead from slipping into chill
- **Ethereal Refinement** — Sky Azurite and Pale Malachite open breath between the dense mineral tones, so the whole palette neither clogs nor stifles
- **Antique Silk Quality** — Song Silk holds the five tones, the way millennia-aged silk settles every intensity into a far, restrained tone

15 And Quiet Flows the Don

Colour Philosophy

Sholokhov spent twenty years writing this epic. The fate of the Don Cossacks never lives in the bright places—it is buried in frozen earth, rusted onto sabres, congealed in the black blood at the trench, scattered through reed marshes the snow has crossed. This palette refuses every "colour" and keeps only what time leaves after wearing them down: not blue but turbid blue, not red but dark blood, not yellow but withered grass, not grey but lead grey.

	Name	Original	RGB	Gloss
	Wormwood Yellow	Полынь · Polyn	142, 120, 70	Reeds and wormwood by the Don after the first frost, a withered yellow-green
	Steppe Lead Grey	Степной Пепел · Stepnoy Pepel	110, 108, 104	The winter steppe where sky and ground merge into one tone, the very grey of a Cossack man's gaze
	Don Earth	Донская Земля · Donskaya Zemlya	118, 86, 52	The chestnut soil unique to the Don basin, brown with the smell of humus
	Rusted Iron	Ржавое Железо · Rzhavoye Zhelezo	122, 66, 36	The rust on sabre, stirrup, and rifle stock—the colour of war corroding metal
	Don Muddy Blue	Мутный Дон · Mutnyy Don	52, 70, 90	The Don is never clear—it carries silt and the blood of the slain, the time-base of the whole novel
	Caked Blood	Запёкшаяся Кровь · Zapyokshayasya Krov	88, 26, 24	The deep brown-red that seeps into uniform three days after a wound—blood as fate, silenced

Tragic Logic of the Colour Structure

- **Cold Grey Holds the Lid** — Steppe Lead Grey and Don Muddy Blue press every warm tone beneath them, as history's grinding of individual fate has never let go
- **Earth Tones Bear the Weight** — Don Earth and Wormwood Yellow are the only "living" still left to this land, but desaturated and dulled—even beauty is tired beauty
- **Dark Blood Anchors the Floor** — Caked Blood is the deepest extremity, never the protagonist, appearing only in the heaviest shadow—like death in this novel, never dramatised
- **Rust Threads Through** — Rusted Iron crosses between earth-brown and dark blood, the carrier of "time-sense"—telling the viewer that all of this has already been long past

16 Cyberpunk Edgerunners

Colour Philosophy

The visual language of Edgerunners is overload aesthetics in essence—colour here is not ornament but symptom. David's breakdown comes with the runaway erosion of fluorescent tones; the neon of Night City is not the sign of prosperity but an anaesthetic; Lucy's blue is the only real exit this world owns. The central contradiction

of the palette is this: the darkest possible base set against the most fluorescent possible highlight, producing a vibration close to bodily discomfort.

	Name	Original	RGB	Gloss
	Psycho Yellow	サイコ黄・Saiko-ki	225, 255, 8	The soul colour of David's jacket, the visual overload at the onset of cyberpsychosis
	Flatline Green	電脳緑・Dennō-ryoku	10, 238, 100	The code stream of network intrusion and the subdermal light tracery of chromed bodies
	Neon Magenta	ネオン桃・Neon-momo	238, 18, 120	The most overflowing neon of Night City, the colour of prosperity's lie
	Edgerunner Red	エッジ赤・Edge-aka	205, 20, 35	The price an edgerunner pays, the colour on the concrete after a street firefight
	Luna Blue	月の蒼・Tsuki-no-ao	15, 32, 98	Lucy looking up at the moon—the only colour that does not belong to Night City
	Night City Void	夜都虚空・Yato Kokū	14, 8, 28	The absolute darkness at the floor of Night City's street, carrying a deep violet undertone

Narrative Logic of the Colour Structure

- **Void Holds the Floor** — Night City Void is the absolute ground, with saturation near zero, the precondition that lets the other five "explode". Without darkness, neon is only pigment
- **Cold/Warm Rupture** — Luna Blue against Neon Magenta and Psycho Yellow forms the most extreme warm-cool opposition—blue is Lucy's lunar dream; pink and yellow are the lies and madness of Night City
- **Fluorescent Overload** — Psycho Yellow and Flatline Green are the visual core of cyberpsychosis aesthetics; placed side by side they produce a vibration close to bodily discomfort
- **Red Finale** — Edgerunner Red is not the protagonist in the plate, but the most honest colour—like the ending, impossible to avoid

17 The Grand Budapest Hotel

Colour Philosophy

Wes Anderson's colour is never realist—it is a precisely calibrated emotional filter. The pink of *The Grand Budapest Hotel* is not pink; it is the colour of an entire vanishing old-European aristocratic world compressed into a single tone. The purple is not purple; it is Monsieur Gustave's final, never-impolite dignity. Every shade has been deliberately de-realised.

	Name	Original	RGB	Gloss
	Vanilla Cream	Crème Vanille	247, 235, 215	Hotel interior, Mendl's sponge, letter paper—the very air of a fairy-tale world
	Alpine Mist	Brume Alpine	168, 178, 196	Snowy alps, the desaturated cool outside a winter coach—the emotional refrigerant
	Mendl's Rose	Rose Méndl	237, 148, 158	The signature pink of the hotel façade and Mendl's confectionery box, a dust-touched old rose
	Antique Gold	Doré Antique	176, 136, 60	Gilded mirror frame, doorknob, shoulder braid—the patina of old aristocracy
	Concierge Violet	Violet Concierge	128, 88, 148	The purple of Monsieur Gustave's uniform, at once authority and absurdity
	Vintage Bordeaux	Bordeaux Vintage	143, 52, 65	The dramatic anchor of dark scenes—library leather, claret, conspiracy and danger

Colour Mapping of the Five Aesthetic Rules

- **Macaron Softness** — Rose Méndl and Violet Concierge carry the main visual, high saturation deliberately tamed in luminance—like the shell of a macaron, distinct yet never glaring
- **Cream Warm Ground** — Crème Vanille rules through the largest negative space, the "void" of Wes Anderson's symmetric composition—keeping the other five from crowding
- **Antique Dark Gold** — Doré Antique carries the weight of "aristocracy", taking no part in the fairy-tale narrative—glowing only in frame and trim
- **Cool Restraint** — Brume Alpine is the only cool, its low saturation making it the regulator, opening a window of breath inside an otherwise sweet warm field
- **Sweet Without Cloy** — Bordeaux Vintage is the most subtle move—a deep dark anchor, the drop of amaretto inside the dessert, giving every lightness its weight

18 Renaissance Florence

Colour Philosophy

The colour of Florence was not designed but grew out of substance itself—lapis lazuli ground into pigment, lead white folded with yolk into tempera ground, gold leaf laid on wooden altar, terracotta fired in the Tuscan kiln into dome tile. All six of these colours have a real material provenance: they were once pigment, ore, building stone, and timber—the spectrum Botticelli, Giotto, and Donatello breathed together.

	Name	Original	RGB	Gloss
	Florentine Ivory	Avorio Fiorentino	238, 228, 208	The lead-white ground of cut Carrara marble and tempera panel, warmed by yolk and linseed
	Altar Gold	Oro dell'Altare	190, 148, 52	The gold leaf of the Madonna's nimbus and Medici ornament, an aged gold still glowing after five centuries of oxidation
	Brunelleschi Cotto	Cotto Brunellesco	172, 84, 50	The signature terracotta of Brunelleschi's dome and Florentine eaves
	Cypress Verde	Verde Cipresso	54, 80, 60	The cypress and verdigris mix of the Tuscan hill
	Lapis Ultramarine	Oltremare di Lapislazuli	46, 70, 118	Ground from Afghan lapis lazuli, priced like gold, reserved for the Madonna's robe
	Tuscan Walnut	Noce Toscano	85, 54, 34	The walnut panel and dark underglaze of the Florentine workshop

Colour Mapping of the Four Temperaments

- **Sacred Solemnity** — Oltremare carries the spiritual weight of the whole set. In the Renaissance, lapis was priced like gold and not available to common commission—its very presence is a sacred declaration; Oro dell'Altare lets out its glow in the most restrained way, and the two together build the rite of religious art
- **Warm Nobility** — Avorio Fiorentino and Oro dell'Altare are the two faces of the aristocratic ground—one the warm touch of marble and silk, the other the Medici memory of wealth feeding art; Cotto Brunellesco then tempers sacred austerity with human warmth
- **Classical Depth** — All six tones are deliberately de-modernised, no pure colour anywhere, each carrying the "impurity" of mineral debris—this is the most fundamental difference between natural pigment and synthetic dye. Heft comes from restrained saturation, depth from each colour's inner complexity
- **Humanist Refinement** — Verde Cipresso and Noce Toscano are the humanist anchors of the palette—the green comes from the natural Tuscan hill, the brown from the walnut panel of the workshop; together they pull the sacred from sky back to earth

19 Soviet Avant-Garde

Colour Philosophy

The Soviet avant-garde never "designed" colour—they declared it. Rodchenko said colour must have a task; Lissitzky said form is politics; Malevich said the Suprematist black square is the absolute of zero. This palette refuses harmony, refuses gradient, refuses the

decorative transition: every colour is a hard-edged manifesto. Red does not explain itself, black does not apologise, grey does not curry favour with anyone.

	Name	Original	RGB	Gloss
	Newsprint White	ГАЗЕТА · Gazeta	225, 218, 205	The newspaper white of Pravda and constructivist brochures, an ink-soaked warm grey
	Propaganda Ochre	ПЛАКАТ · Plakat	200, 150, 32	The ochre of Klutskis photomontage poster and collectivisation propaganda print
	Concrete Grey	БЕТОН · Beton	118, 114, 108	The poured concrete of Tatlin's Tower, Moscow factory, and Five-Year-Plan worksite
	Blueprint Blue	ЧЕРТЁЖ · Chertyozh	50, 80, 138	The blueprint blue of the working-class uniform, deliberately desaturated
	Lenin Red	КРАСНЫЙ · Krasnyy	196, 28, 28	The revolutionary red of the Bolshevik flag and Rodchenko poster, pressed down in saturation to weigh like iron
	Cast-Iron Black	ЧЁРНЫЙ · Chyornyy	24, 20, 18	The absolute black of Malevich's Black Square, where nothingness and certainty coexist

Colour Mapping of the Six Aesthetic Rules

- **Red-Black Hard Strike** — КРАСНЫЙ and ЧЁРНЫЙ are the structural core, with no transition and no buffer between them—contrast itself is the argument
- **Industrial Grey Axis** — БЕТОН takes part in no drama, it merely stands and bears the load—like the nameless workers of the Five-Year-Plan, the spine, not the focus
- **Mechanical Blue Precision** — ЧЕРТЁЖ is pressed nearly to colourlessness, forming an ideological warm-cool opposition with КРАСНЫЙ—red the passion of revolution, blue the discipline of construction
- **Democratic Coarse White** — ГАЗЕТА is the only "anti-elite" tone, refusing the aristocratic warmth of ivory and choosing the coarseness of cheap print
- **Unkept Ochre** — ПЛАКАТ is the most tragic tone, the colour of poster wheat and forever-sunlit utopian tomorrows—a colour of promise, not of reality

20 Constantinople

Colour Philosophy

Constantinople is the only city in human history to belong, all at once, to two continents, three civilisations, and four religions—its colours are never simple. The gold of Hagia Sophia's dome holds Greek craft, Roman engineering, and Eastern theology in superposition. The deep blue of the Bosphorus mixes the Black Sea's chill with

the Aegean's warmth. The imperial purple is luxury distilled from Mediterranean murex.

Name	Original	RGB	Gloss
 Proconnesian Ivory	Λευκός · Fildişi	236, 225, 207	Marble of the Sea of Marmara, the floor of Hagia Sophia
 Hagia Sophia Gold	Χρυσός · Altın	195, 150, 42	The aged gold smoked by fifteen centuries of candles, sacred and unshowy
 Theodosian Ochre	Ωχρα · Toprak	170, 112, 50	The brick of the Theodosian Walls, the shared ground of Greek, Roman, Anatolian
 Cypress Dark Green	Κυπαρίσσι · Selvi	50, 76, 58	Byzantine cemetery and Islamic garden—two faiths watching the same eternity
 Imperial Murex	Πορφύρα · Mor	102, 32, 65	Restricted to the Byzantine emperor: a single gram demands ten thousand murex shells
 Bosporus Blue	Βόσπορος · Boğaz	30, 52, 88	The deep blue of the strait at dusk, where the Black Sea meets the Aegean

The Colour Structure of Civilisations in Confluence

- **East-West Warm/Cool Axis** — Bosporus blue (Western reason, maritime order) and Theodosian ochre (Eastern earth, Anatolian soil) form the East-West civilisational axis—opposite in temperature, they coexisted for a millennium without dissolving in this city
- **Sacred Triangle** — Hagia Sophia gold, imperial purple, Proconnesian ivory together build the colour space of the sacred—gold is the light of God, purple is God's human agent, ivory is the architectural skin in which God resides
- **Purple as Civilisational Bridge** — Imperial Murex bears the most complex role in the whole set, belonging at once to Roman imperial tradition, Byzantine Christian theology, and Persian-Eastern court luxury
- **Dark Green Holds Deep Time** — Cypress dark green carries the longest time span in the most low-key form—present at once in Byzantine cemetery cypress, Ottoman garden, and the verdigris dome of the mosque
- **Restrained Gold** — The palette deliberately compresses Hagia Sophia gold into mineral-tone saturation, glowing without glare—this is the central logic of Byzantine mosaic: gold is not ornament but the materialisation of light

21 France

Colour Philosophy

French colour is never simply colour—it is the material appearance of a worldview. The Republican red holds the guillotine and the rose;

the deep blue houses both Descartes' reason and Monet's morning mist; champagne ivory is the same ground tone Versailles marble shares with Left-Bank café paper. The palette tries to catch the central inner contradiction of the French spirit: extreme reason and extreme romance, coexisting on the same patch of land.

Name	Original	RGB	Gloss
 Marianne Red	Rouge Marianne	180, 32, 40	The Tricolour red, but no flat red—a mid-value between Bordeaux's depth and the passion of the Phrygian cap
 Champagne Ivory	Ivoire Champagne	232, 222, 205	Not pure white—champagne effervescence, Louvre limestone, and Left-Bank café stationery
 Republic Blue	Bleu République	44, 74, 138	The Tricolour blue, the royal blue of Sèvres porcelain—the blue of Enlightenment reason
 Provence Lavender	Lavande Provençale	143, 108, 148	The true colour of a Provençal lavender field between afternoon sun and chalk-grey soil
 Versailles Olive	Olive Dorée	142, 133, 58	The gold-green of clipped box hedge in the formal garden of Versailles—the colour of classical French parterre aesthetics
 Parisian Zinc	Zinc Parisien	122, 126, 132	The reflection of Haussmannian Parisian zinc roof under overcast sky

Colour Structure of the French Spirit

- **Tricolour Reread** — Rouge Marianne, Ivoire Champagne, and Bleu République are not the flag reproduced but its spirit de-symbolised and re-distilled—red is given the weight of Bordeaux, white the temperature of time, blue the depth of the Enlightenment. The flag is political; this palette is cultural
- **North-South Tension** — Lavande Provençale and Zinc Parisien form France's deepest spiritual opposition—the south is the sense, soil, sun, and lazy romance; Paris is reason, geometry, grey sky, and restrained elegance
- **Avant-Garde Strike Latent** — Olive Dorée placed against Bleu République is the most avant-garde pairing in the set—one belongs to the Sun King's classical order, the other to the rational edge of republican revolution—hues close, semantics opposed
- **Restrained Elegance** — Every tone is deliberately tamed in saturation—red does not burn, blue does not chill, violet does not flirt, gold does not boast, grey does not deaden, white does not glare. The French sense of "elegance" has never been the intensity of colour, but its trained, exact self-restraint
- **Earthbound Warmth** — Ivoire Champagne and Lavande Provençale weave the palette's "earth-sense" baseline—one the warmth of limestone and wheat, the other the warmth of dried lavender and chalk soil. French romance has never hung in midair

22 *Kyoto**Colour Philosophy*

The colours of Kyoto never speak first—they wait to be seen. The moss green of the Zen courtyard does not compete, the white gravel of the karesansui says nothing, the tea-brown of machiya cedar is silent in the rain, the deep-indigo night sky presses the thousand-year capital without a sound. Only the vermilion torii, amid all this restraint, burns the highest temperature in the smallest area—like a single stem in the tea room, the one point of heat inside the cold and still.

	Name	Original	RGB	Gloss
	Silk White	絹白 · Kinushiro	234, 226, 212	The ground of Nishijin silk and washi paper, the natural warm tone of silkworm and paper-mulberry
	Withered Tea	枯茶 · Karacha	110, 84, 64	The brown of a century-old machiya cedar pillar shaped by time and hearth smoke—the colour of Rikyūs wabi
	Cherry Grey	桜鼠 · Sakura-nezumi	204, 184, 178	Fallen cherry on a stone lantern, blurred by rain—the precise definition of mono no aware
	Bamboo Grey	青竹鼠 · Aotake-nezumi	116, 126, 120	The bamboo node in the dawn mist of the Arashiyama grove, a Zen statement of warm-cool balance
	Moss Colour	苔色 · Koke-iro	80, 94, 68	The deep moss green at the foot of the Ryōan-ji stones, the dull print time has left
	Deep Indigo	紺 · Kon	34, 40, 66	The deep indigo of Noh costume and Kyoto-Yuzen night patterns—the colour of meditation itself

Colour Structure of the Kyoto Spirit

- **Negative Space as Bone** — Kinushiro and Sakura-nezumi build the palette's breathing room—the former is void, negative form, the tea-room wall; the latter is the perceptual edge of fading-not-yet-gone. Kyoto aesthetics is not about filling in, but about knowing where there should be nothing
- **Warm/Cool Balance** — Among the six grounds, Karacha and Koke-iro are warm, Kon and Aotake-nezumi are cool, Sakura-nezumi and Kinushiro drift in between—four-season balance, the cold stillness of the Zen courtyard exactly counterpointed with the warmth of machiya
- **Yūgen via Low Saturation** — All colours are deliberately stripped of brightness, mimicking Kyoto's basin morning mist—the mist does not erase colour but draws it inward, which is the very physics of yūgen
- **Ink-Wash Eastern Structure** — The whole palette can be read as one ink-wash—Kon is the deep ink, Koke-iro the middle ink,

Karacha the light ink, Aotake-nezumi the spent ink, Sakura-nezumi the ink's diffusion, Kinushiro the paper—and an unseen vermilion is the painter's final cinnabar seal

23 Siamese Dream

Colour Philosophy

The cover of *Siamese Dream* is itself a palette manifesto—two girls leaning into each other inside a softly out-of-focus warm halo, a faint deep green pressing in from behind, an orange light spilling through like some afternoon out of memory, beautiful past the point of belief. This is not the high-contrast assault that rock-album sleeves usually reach for; it is a deliberately constructed dream texture—overexposed, soft, tender film-grain distortion—just as Corgan poured the rawest emotion into the most distorted wall of guitars.

	Name	Original	RGB	Gloss
	Luna	Luna	238, 226, 208	The warm white halo of the cover, the lingering breath of the album's closing track—not pure white, but the trace of human warmth that survives film overexposure, the last soft light before waking
	Disarm	Disarm	182, 180, 193	A washed-out grey-violet. <i>Disarm</i> is the album's least-defended moment, strings and bells stripping every layer of distortion—the colour just before glass shatters: transparent, brittle, carrying the chill of childhood wounds
	Today	Today	198, 158, 65	A dusted, antiqued gold. <i>Today</i> sounds like the brightest melody on the record yet was born of Corgan's darkest days—so this gold must be faded, slightly bitter beneath its sweetness, beautiful and not to be trusted
	Hummer	Hummer	150, 145, 135	Smoke-ash brown. <i>Hummer</i> stacks wall after wall of guitar to manufacture a weightless suspension—this is the colour seen by a sleep-walker, neither awake nor asleep, the most honest material form of shoegaze aesthetics
	Mayonaise	Mayonaise	188, 105, 40	A deep, settled burnt orange, the colour of the cover's light source. <i>Mayonaise</i> is the slowest, most painful, most private cut on the record—this orange is not warmth but the slow, low-temperature caramelisation of an emotion held in too long
	Soma	Soma	42, 68, 48	The deep green half-hidden behind the cover, the nine-minute epic that climbs from tender hush to collapse—the colour of organic matter growing in darkness, moss and rotting leaves, where beauty and suffocation share the same body

The Paradox Structure of Adolescent Feeling

- **Dream-Wrap and Distortion** — Luna's warm white and Hummer's smoke-ash together form the record's *out-of-focus layer*—every pain is first overexposed, softened, and wrapped in a wall of

sound before it is allowed to be heard. Not avoidance, but releasing pain at a survivable density

- **Beautiful Vessels for the Heaviest Contents** — Today's tarnished gold and Disarm's grey-violet sit at opposite poles of the paradox—the former dresses self-destructive impulse in a bright melody, the latter tells a childhood wound through music-box bells. Corgan always pours the heaviest contents into the most beautiful vessel; this is the album's core emotional strategy
- **Low-Temperature Caramelisation at the Emotional Core** — Mayonaise's burnt orange is the palette's emotional core (and conveniently the pal5=primary slot)—not red on fire, but orange that has already burned, slow-roasted by time, weighted down by its own gravity. The heat here is not from explosion but from refusing to go out
- **The Abyss as Deepest Anchor** — Soma's deep green (pal6=accent) is the only *black-substitute* among the six—not pure black but organic black, the black of moss, leaf-rot, and deep forest. The palette never anchors on pure black; it presses the record down with a darkness that is still alive and still growing
- **Permeation over Saturation** — All six colours retreat from brightness because *Siamese Dream's* feelings never explode—they seep. No single colour fights for attention; each lingers at its lowest posture, the way a shoegaze guitar sustains long after the strike
